

Lawn Care Tips

Turf Installation Guide

- Step 1** Remove boulders, rubble, debris and treat existing weeds with round up and remove from the area.
- Step 2** Using a suitable turf underlay top soil blend cover the area with top soil.
- Step 3** Level the area with a lawn leveler or bobcat. Remember to be aware of drainage requirements.
- Step 4** Apply a starter fertiliser before laying the turf. Hancey's Turf has a range of fertilisers appropriate for all turf varieties.
- Step 5** Once the ground is prepared, lay your turf as soon as it arrives on site.
- Step 6** Roll your new lawn to remove any air pockets, unevenness and to ensure good contact with the soil.
- Step 7** Water thoroughly, keeping the root zone saturated for two weeks.
- Step 8** After the lawn is established reduced watering to once a week. Mow the new lawn approximately four weeks after laying the turf. This should be a light mowing.

Mowing Requirements for Grass Varieties

Grass Variety	Mower Setting	Mowing Requirements
